

MONIQUE ERASMUS

Junior Python Backend Developer

ABOUT ME

Detail-oriented Junior Python Developer with a strong background in administration, customer relations, and business operations. HackerRank certified in basic Python and SQL. Experienced in managing stock levels and communication in fast-paced environments. Passionate about using Python code to automate everyday office tasks and build simple, reliable software tools.

WORK EXPERIENCE

Personal Assistant & Project support 2020–2024

ICC Software

- Managed team schedules, meetings, administrative tasks, and internal communication.
- Responded to customer inquiries and helped resolve client system issues.
- Gained 4 years of experience working inside a professional software office environment.

Client Liaison & Sales Support April 2024 – October 2025

Digiklix

- Conducted ±70 client calls daily to follow up on marketing performance.
- Explained statistical results and monthly performance reports clearly to clients.
- Sold custom website packages based on client business goals.

Multi-Role Assistant (Marketing, Admin & Operations) 2026 – Present

Heavenly Healing

- Handled daily shop operations, sales, and stock control metrics.
- Managed direct customer communication via WhatsApp, email, and phone.
- Created, filmed, and edited short-form video content and social media ads.

TECHNICAL VERIFICATIONS & SKILLS

- Certifications: Python (Basic) & SQL (Basic) – HackerRank Profile Verification
- Core Python: Variables, loops, functions, lists, dictionaries, error handling
- Object-Oriented Programming: Using classes and blueprints to organize code
- File Handling: Reading and writing data to local text, CSV, or JSON files
- Dev Tools: Git version control ('add', 'commit', 'push'), VS Code, Command Line

FEATURED PYTHON PROJECTS

- 1. Shop Inventory Management System A text-based Python terminal program built to keep track of store stock levels. * What it does: Lets users add, remove, and view stock quantities. * Tech used: Python classes, text file handling, input validation. * Real-world focus: Automatically saves stock data to a file so it doesn't delete when the program closes, and uses error handling to prevent crashes from bad inputs. 2. Personal Expense Tracker Ledger A simple script designed to log and categorize daily monetary expenses. * What it does: Keeps a running history of user spending. * Tech used: Dictionaries, JSON file storage, data loops. * Real-world focus: Stores your logged transactions cleanly in a local database file, keeping records safe between runs.
